

I oppose any change to the 160m band plan which prohibits the use of traditional two way AM, CW or SSB at any part of the spectrum. It is too narrow a band to divide up for diverse use. If anything, I suggest restricting the band to tradition communications generally done with microphone to microphone, telegraph key to telegraph key, or teleprinter to teleprinter contacts. If someone desires to facilitate email or cellular voice mail, let them use the internet and satellite services because that is what they are for. My thoughts after 41 years of licensed amateur service and 11 years of military experience. Sincerely, John Hensley
